CIMx Interax[®] Version 6.1, Affordable Paperless Manufacturing

Cincinnati, OH (1/2008): CIMx, a leader in integrated manufacturing execution solutions for the mid-market, is proud to announce the release of Interax Version 6.1. This fall, CIMx delivered the 6.0 release, a web-enabled application. To further position themselves within the mid-market the 6.1 release increases overall functionality by providing several major enhancements.

The Interax 6.1 suite provides an end-to-end manufacturing solution tailored to mid-market manufacturers and includes:

- Routing and work instruction package creation
- Approval and revision control
- Order management
- Quality and tool management
- Shop floor control

Major enhancements include:

1. Propagate change: Automatically update shop orders with engineering changes
2. Job status monitoring: Status of all orders can be displayed on a sortable screen, complete with drill down capability to identify problems at the source
3. Bar code job start: Correct order, operation and instruction set can be retrieved via bar code scan

The CIMx suite is uniquely designed to meet the needs of mid-market manufacturers, leveraging the tools they currently use, providing rapid implementation to minimize disruption and maximize ROI.

"With CIMx, mid-sized manufacturers can now manage manufacturing engineering, quality engineering and the shop floor using a single solution," said Glen Baldrige, CIMx Director of New Product Engineering. "The Interax solution can be implemented in a fraction of the time of traditional MES systems, at a much lower cost."

About CIMx - CIMx delivers the most competitive software in our industry. CIMx software streamlines manufacturing operations: it removes the source of errors and lost productivity across the shop floor. In a time of increasing global competition, U.S. manufacturers gain an edge that helps keep work right here. Throughout its history, the CIMx philosophy remains constant – make it affordable, make the implementation seamless and make the support capabilities as efficient as possible for all customers.
