CIMx Introduces Interax[®] Version 6.2.5 Web-Enabled Paperless Manufacturing

Cincinnati, OH (5/15/2009): CIMx, LLC announced today the immediate release of Interax 6.2.5. This release combines the functionality of their highly successful CIMx Apps application with their new Interax suite in one comprehensive Commercial-Off-The-shelf (COTS) software solution.

“This release is really remarkable” said Kristin McLane, President of CIMx “in that it brings the power of manufacturing tools that the Fortune 50 companies have used for years into the reach of their suppliers and other US manufacturers that want to increase output, lower costs and risks and stay competitive. This will change manufacturing forever.”

By removing paper documents from the manufacturing process, Interax software delivers a proven Return on Investment (ROI) and a low risk path to higher quality, fewer errors, and lower costs for production facilities. More than 10,000 people at CIMx customer sites have already saved millions of dollars with added savings each and every year.

Interax features:

- A more accessible, web-enabled system, allowing off-site access to data and processes
- A simplified path to paperless manufacturing with minimal integration, data migration or retraining of staff
- Real-time production information for rapid and accurate decision making
- The creation of work instructions using common productivity tools such as Microsoft Office

Paperless manufacturing has been proven to increase productivity and quality across a shop floor. Productivity improves by providing everything a person on the floor needs to do their work at their work station accurately and when needed. Quality improves when data is collected in an environment with accurate variation checks. Paperless manufacturing also provides a “greener” operation environment by dramatically reducing the need for paper, ink, and storage.

About CIMx - CIMx has been providing a rich set of commercial off-the-shelf (COTS), integrated solutions for production-critical manufacturing in Fortune 100 customers like GE-Aircraft Engines, Boeing Integrated Defense Systems, BAE Systems and Bell Helicopter Textron. A leader in Interactive Web-based Instructions, CIMx software has been proven to help customers achieve an ROI in less than 1 year and predictably reduce their manufacturing costs. CIMx can be reached at 1-877-FORCIMx or on the web at www.cimx.com
