

## **CIMx Customer Success Story 4**

**Problem:** A large defense company acquired a new contract and decided to start production in a new plant. They specified an efficient paperless manufacturing shop floor to meet the demanding needs of this new product. They also required a rapid installation of the technology to meet the rapid start up of production.

**Solution:** The Company chose CIMx' Interax paperless manufacturing system, the only real COTS (Commercial-Off-The-Shelf) shop floor execution system available, based on the successful installation of Interax at a related facility. Interax is a customer configurable solution that can rapidly be adapted to local shop floor operations.

**Result:** The Company is realizing its vision of a paperless shop floor and is embarking, with CIMx assistance, to tie all production and measuring equipment into the solution so there is a seamless flow of production data into a central control point. Production execution and plant maintenance management will ultimately be controlled by this single solution.

### **Benefits:**

- Reduced walk around and wait time on the shop floor
- All information needed at a work center is available all the time
- A single "as-built record" including all measures and data collected
- An accurate record of who did what when for billing
- Increased shop floor productivity
- Increased product quality
- Cost savings across the entire shop floor
